

## Blinds Between Glass

Working inside a completely sealed environment the blinds are virtually maintenance free.

They can block the sun out and provide maximum energy efficiency through a smart building management system.

They can be found in many high-end offices, luxury residences, hospitals, hotels and other premium developments due to their ability at provide outstanding privacy and sound insulation.

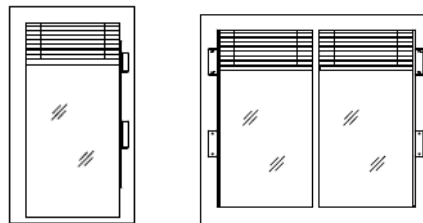

Clean Modern  
Luxurious and  
Affordable

### Two Types

Our single panel has a maximum width of 1.2m by 2.5m high or 1.8m wide by 1.8m high and our double panel can go 1.7m wide by 2.5m high or 2.6m wide by 1.6m high. The blinds can meet most window and door sizes.

The toughened glass can be either 5mm or 6mm thick making the sealed unit sizes either 28.5mm or 30.5mm thick. We now offer **LowE** glass for further sun reflection.

## Operated by Magnets

There are two magnets which slide up and down tracks on the outside of the glass which control the retraction up and down and the tilt function. As there is no intrusion inside the sealed unit no dust can penetrate the environment inside the glass.

There is also a motorized version available.

## Quality – World Class

The BBG's are manufactured in a world-class thermostatic, humidity-controlled and dust-free production area. The smart blind units are tested at several times higher than industry and international requirements to meet stringent standards for comfort, safety and energy conservation.
